SUMMARY

Software developer with hands-on experience building and deploying web applications, browser extensions, and API-driven tools. Skilled in JavaScript, React, Python, SQL, Supabase, REST APIs, Git/GitHub, responsive UI development, authentication, database-backed applications, and software testing.

EXPERIENCE

Shepherd Healthcare – Web Developer – Phoenix, Arizona

May 2025 – Present

- Design and maintain a responsive production website across 6 core navigation sections, translating stakeholder requirements into clear patient-facing content for desktop and mobile users.
- Structured primary care, behavioral health, telehealth, location, insurance, and contact information into a single web experience that improves access to essential clinic resources.
- Maintain production UI, content, and usability updates based on ongoing stakeholder feedback, keeping service, hours, location, insurance, and contact information current.

SKILLS

Languages: JavaScript, Python, Java, SQL, HTML, CSS

Frameworks & Technologies: React.js, Node.js, Vite, Supabase, REST APIs, JSON, Tkinter

Tools & Practices: Git, GitHub, VS Code, Vercel, Figma, responsive design, debugging, software testing

EDUCATION

Illinois Institute of Technology – Master of Science, Information Technology & Management – Chicago, IL

Aug 2026 – Present

Illinois Institute of Technology – Bachelor of Information Technology & Management – Chicago, IL

May 2026

PROJECTS

JeNieCast - JavaScript, Vite, Supabase, PostgreSQL, Vercel

- Built and deployed a full-stack personal watchlist application with Google OAuth, user-specific data, filtering, and 4 watch-status categories across responsive dashboard and vault views.
- Implemented Supabase authentication and PostgreSQL-backed storage with user-specific records, enabling signed-in users to manage private watchlists without exposing other users' data.
- Engineered a read-only Vercel serverless health endpoint with a daily cron job to maintain Supabase activity and reduce inactivity-related downtime on the backend.

CheckURL Browser Extension - JavaScript, HTML/CSS, Firefox Extension APIs, Security APIs

- Designed a Firefox browser extension that automatically scans page links for suspicious or malicious URLs, eliminating the need to copy and paste links into external scanners manually.
- Led UI/UX contributions, user stories, journey mapping, product documentation, and customer research within a 7-member multidisciplinary project team.
- Validated the prototype through customer feedback, earning a 4/5 reaction and quality rating and identifying actionable improvements for warning clarity and user education.

Bitcoin Market Dashboard - Python, Tkinter, REST APIs, JSON

- Developed a Python/Tkinter dashboard that aggregates cryptocurrency prices, market sentiment, and news from multiple REST APIs into one desktop interface with asynchronous data retrieval.
- Implemented threaded refresh logic plus rate-limit and network-error handling, keeping the interface responsive when external data sources slow down or fail.

HONORS

Dean's List, Illinois Institute of Technology - 2025 and 2026
